

FOR IMMEDIATE RELEASE

## New Camoplast Cobra™ High Performance Track

Camoplast Inc., the world's largest manufacturer of snowmobile tracks, introduces the new Cobra™ high performance trail riding track.

Developed from the industry benchmark Camoplast RipSaw™ track, the new **Cobra** will give superior straight-line performance in soft and loose snow conditions while improving the "fun factor" by allowing somewhat "looser" handling with the back end sliding through the corners. Yet the Cobra will match the RipSaw in top speed capability.

The lightweight **Cobra's** new traction design features rigid fingers connected by cupped sections that scoop the looser surface snow. The aggressive 1.25-inch lug features an additional 0.102-inch cutting edge and "stepped" fingers for improved traction in hard pack snow conditions, bringing the total lug height to 1.352-inches.

Fully-clipped for better compatibility with no-slip drive cogs, the new **Cobra** is available in three 2.52-inch drive pitch models. They are the 15-by-121-inch, number 9052H, for most popular trail sleds; a 15-by-128-inch, number 9081H, for certain specific Arctic Cat and Polaris machines; and a 15-by-136-inch version, number 9061H, for many two-ups and crossovers.

Camoplast tracks equip ninety percent of all snowmobiles on the trail today, and are available as aftermarket performance upgrades from better snowmobile dealers in snow country worldwide.
