

New Camoplast ICE Attak™ Track

Camoplast Inc., the world's largest manufacturer of snowmobile tracks, introduces the new **ICE Attak™** pre-studded track for high performance trail riding.

The latest member of Camoplast's exclusive Ice Control Enhancement (ICE) Technology series, the **ICE Attak** adds the hard surface traction that only metal track studs provide to the outstanding handling characteristics of the Camoplast HackSaw™ track.

Engineered for superior performance on hard packed snow trails with icy spots, the slightly (1/16-inch) taller ICE Attak has a 1.0625-inch lug height and 264 "sharp tip" lug studs in the 121-inch model that are installed to provide 31 separate and unique scratch lines.

The new "sharp tip stud" design, found in many 2008 Camoplast ICE Technology tracks, utilizes a pointed cone-shaped carbide tip in place of the previous cylindrical tip. The "sharp tip" also protrudes farther from the stud body than on previous Camoplast lug stud designs. The result is easier and deeper penetration of ice or hard pack snow.

Single-ply construction technology is utilized on the **ICE Attak** to reduce internal friction and resulting heat build-up. This results in a thinner, slightly lighter weight track with reduced rolling resistance for more efficient power transfer. Fully-clipped for better compatibility with no-slip drive cogs, the new ICE Attak is available in three sizes. The 15-by-121-inch model, number 9028H, fits most popular trail sleds while the 15-by-128-inch model, number 9037H, fits certain late model Arctic Cat and Polaris machines. A 15-by-136-inch model, number 9029H, fits many two-up and crossover models.

Camoplast tracks equip ninety percent of all snowmobiles on the trail today, and are available as aftermarket performance upgrades from better snowmobile dealers in snow country worldwide.
