

New Camoplast ICE Ripper™ XT Track Features New “Sharp Tip Stud”

Camoplast Inc., the world’s largest manufacturer of snowmobile tracks, has improved the popular **ICE Ripper™** pre-studded track series by upgrading to a new “**sharp tip stud**” that is engineered to increase traction for improved safety.

The new “sharp tip stud” design utilizes a pointed cone-shaped carbide tip in place of the previous cylindrical tip. The “sharp tip” also protrudes farther from the stud body than on previous lug stud designs. The new tip allows easier and deeper penetration of ice and hard pack snow for a better bite resulting in reduced track spin and general elimination of track side-slippage. This pays off in better handling, quicker acceleration, and especially shorter stopping distances on ice with the new Camoplast **ICE Ripper XT** track that carries this new lug stud.

A turnkey, light-weight, economical approach to traction enhancement for snowmobile safety and performance, the Camoplast ICE Ripper track series was developed from the highly successful Camoplast RipSaw™ track. Priced at about \$120 more than a comparable RipSaw, the ICE Ripper was introduced to positive press reviews and is now among the most popular replacement tracks on the market. It is even available as a factory option for some snowmobiles.

The new single-ply, fully-clipped tracks are available in a 15-by-121-inch size, number 9077H, to fit most popular late model snowmobiles and new 2.86-inch drive pitch versions for **2008 Ski-Doo® Rev XP** models, number 9041H for 120-inch applications and number 9042H for Renegades. ICE Ripper tracks are also available in a 15-by-128-inch size, number 9038H, to fit specific recent models from **Arctic Cat** and **Polaris** and a 15-by-136-inch model, number 9000H, for many two-up and crossover sleds.

Camoplast tracks equip ninety percent of all snowmobiles on the trail today, and are available as aftermarket performance upgrades from better snowmobile dealers in snow country worldwide.
