

FOR IMMEDIATE RELEASE

## **New Camoplast Rev XP Track Options**

Camoplast Inc., the world's largest manufacturer of snowmobile tracks, is ready with track upgrades for the new 2008 Ski-Doo® Rev XP models with the 2.86-inch track drive pitch.

The new 2.86-inch track drive pitch helps lighten the new 2008 Ski-doo Rev XP models, but standard 2.52-inch drive pitch tracks cannot be installed without changing the track drivers. Camoplast offers a series of high-performance aftermarket tracks engineered specifically for these new Ski-doo models. These light-weight single-ply tracks provide a weight savings of up to 12% over similar models in the Camoplast 2.52-inch drive pitch track series while reducing rolling resistance to allow more efficient power delivery.

The industry benchmark RipSaw™ track is available in a 120-inch long version with a trail-friendly 1.0-inch lug (number 9048H). The standard 1.25-inch lug RipSaw is available in 120-inch (number 9049H) and 137-inch (number 9080H) versions, while the aggressive 1.5-inch lug RipSaw also comes in 120-inch (number 9075C) and 137-inch (9076C) models.

For those who want the considerable traction advantages of a pre-studded track, the ICE Ripper™ XT with its 1.25-inch lugs and new "sharp tip" lug studs is also now available for Rev XPs. The 120-inch long version (number 9041H) fits most liquid-cooled 2008 MX-Z and GSX applications, while the 137-inch long model (number 9042H) is for the MX-Z Renegade variants. Cross-country riders can choose the Challenger Trail with a 1.75-inch lug in 120-inch (number 9069C) or 137-inch (number 9070C) versions.

Mountain riders can equip their XP Summits with the Challenger™ that features a super aggressive 2.313-inch lug. It is available in 146-inch (number 9064M), 154-inch (number 9065M), and 163-inch (number 9066M) lengths.

Camoplast tracks equip ninety percent of all snowmobiles on the trail today, and are available as aftermarket performance upgrades from better snowmobile dealers in snow country worldwide.
